

The connected future of vehicle development

Calponia – The automotive platform of tomorrow

modular and customized

Development tools can be set and compiled as needed.

FEATURES

- ▶ Collaborative administration of teams, projects and tasks
- ▶ Vehicle, equipment and test fleet management in one place
- ▶ Data measurements, storage and analytics
- ▶ With an integrated open service App Store

More convenient for development engineers

central access

across all data and tools

clear overview

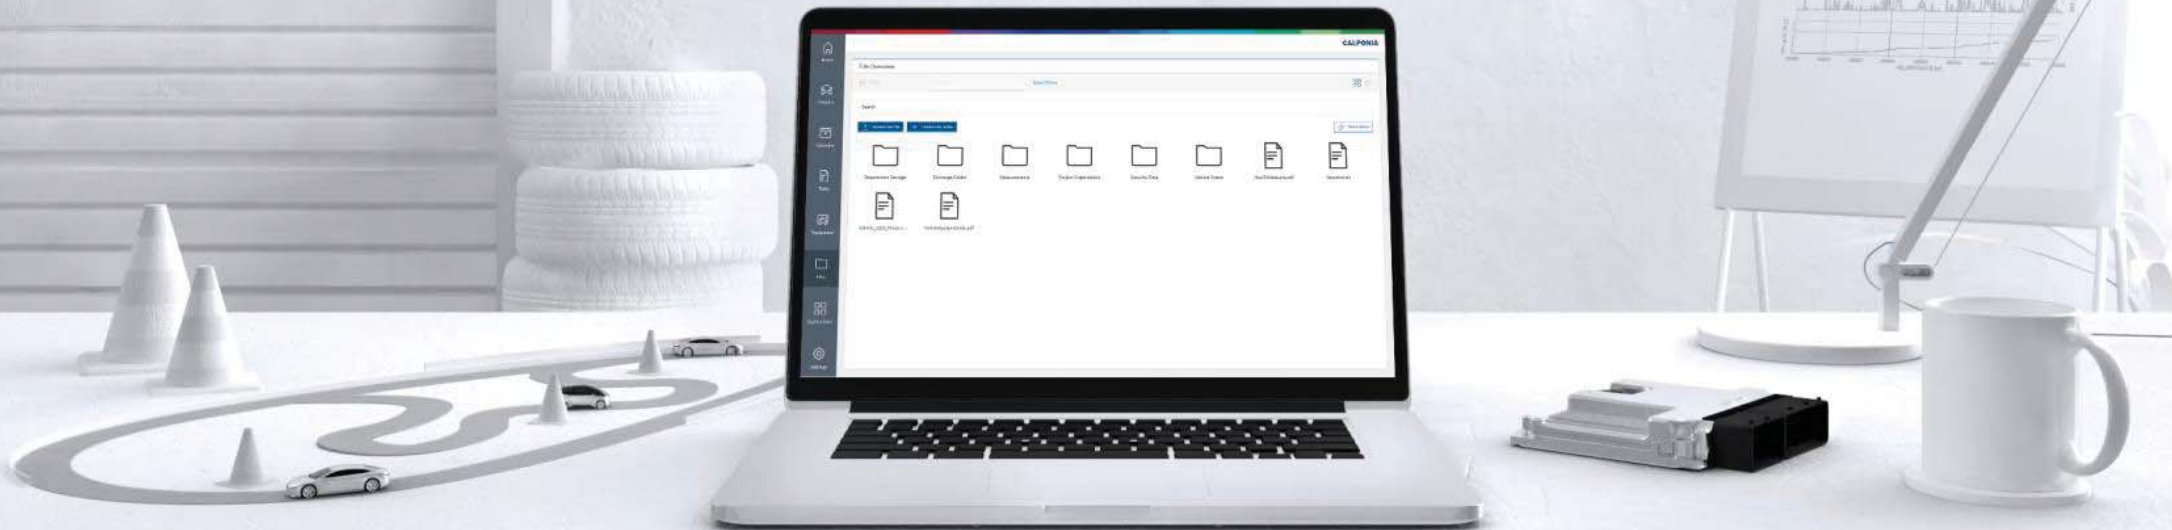

of all project activities visible for everyone

customization

of workflows for task management,
vehicle planning and measurement data

work from anywhere

thanks to the automatic transfer of
measurement data

Vehicle series management redefined

easy vehicle management

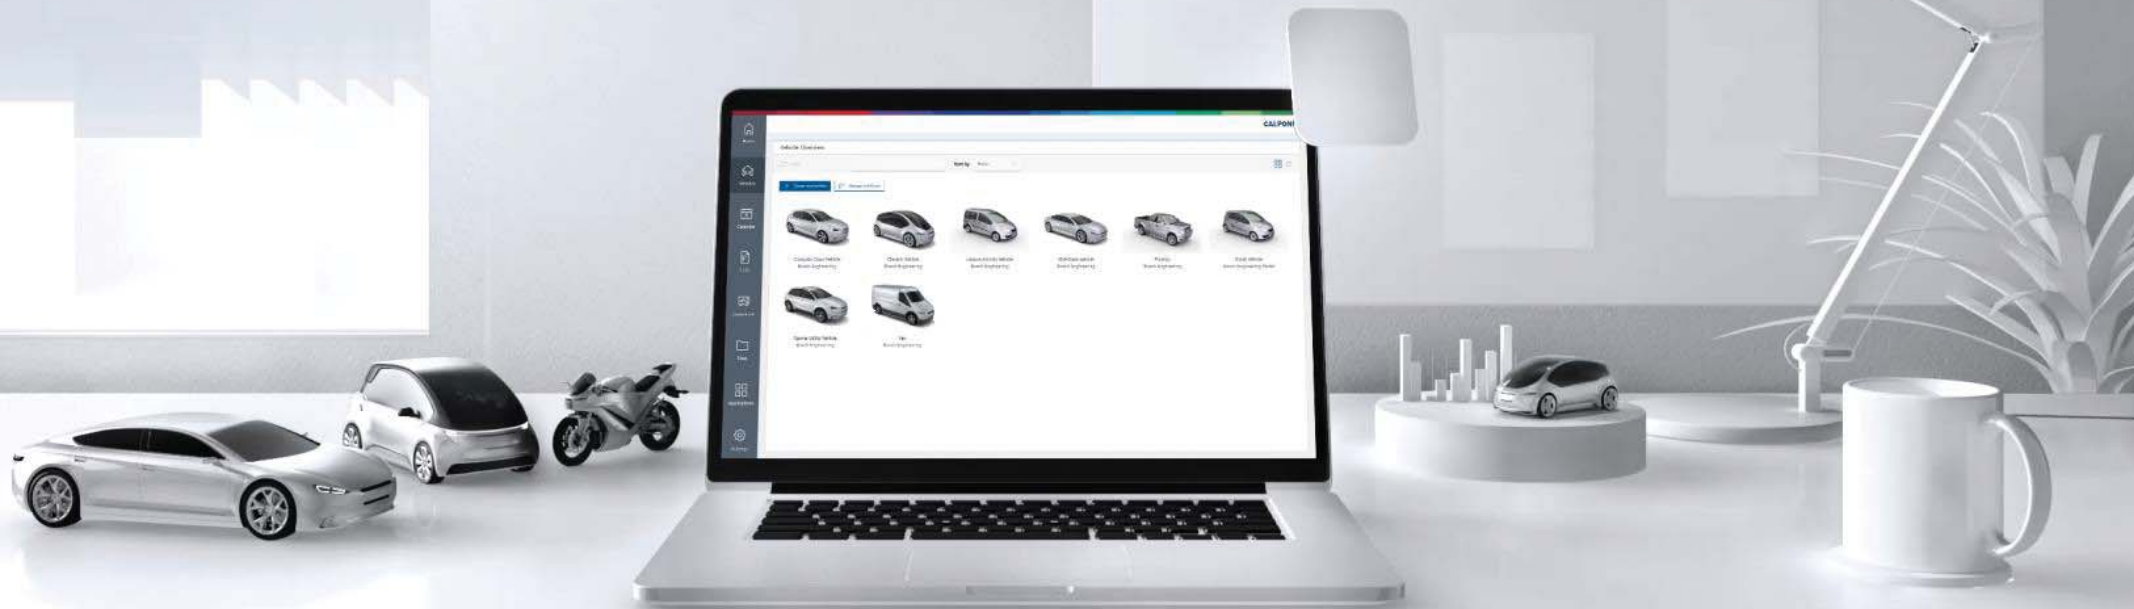

availability, position, development state, access to meta data

lower costs

due to optimized planning of test fleets, routes and equipment

efficient use of

cost-intensive test vehicles due to a central reservation system

Calponia from Bosch Engineering – New benchmark for the connected future of vehicle development

**many years
of experience**

and expertise in all areas of
vehicle development

OUR STRENGTHS

- ▶ Easy and quick integration of customized applications
- ▶ No additional infrastructure required
- ▶ Scalable cloud storage with integrated rights management (user/account management)
- ▶ Integration of various connectivity units
- ▶ User-friendly platform and intuitive operation
